

Supercharge Your Patient Care and Reduce Costs

Heal Wounds With Energy
First Using dermaPACE®

dermaPACE®

The dermaPACE System is a powerful game changer for wound care clinicians treating patients with chronic diabetic foot ulcers. It allows you to supercharge your treatment plan and provide an extra layer of care while reducing overall health costs.

Treating patients with chronic diabetic foot ulcers can be time-consuming and challenging. Oftentimes, current protocol does not result in wound healing, and multiple office visits are not realistic for your patients.

Incorporate the dermaPACE® System into your wound care decision tree and harness its novel shockwave technology to accelerate healing, improve patient outcomes, and reduce cost.

What Is dermaPACE?

The dermaPACE System is a fast, noninvasive shockwave system that works in conjunction with standard of care by using energy to stimulate healing in your patients with advanced stage diabetic foot ulcers during their routine visits to your office.

The dermaPACE System is an advanced wound care product that utilizes Pulsed Acoustic Cellular Expression (PACE®), a proprietary form of focused shockwaves that are applied on top of the wound bed and periwound area. The dermaPACE System is the only focused shockwave system cleared by the FDA in the U.S. for the treatment of diabetic foot ulcers (DFUs).

Mechanism of Action

- Increased blood flow and tissue perfusion
- Inflammation modulation
- Protein signaling and growth factor upregulation
- Angiogenesis
- Tissue regeneration and wound epithelialization

Benefits of dermaPACE

Cost-effective – only \$55 per treatment
(CPT codes 0512T and 0513T)

Can be used during your patient's once-a-week office visit;
does not require an additional appointment

Fast and easy to use

Any trained healthcare professional can
operate under a physician's care

Stimulates blood perfusion two to eight hours after treatment

Promotes faster healing

Average treatment only takes three to five minutes

The mobile unit fits seamlessly within your
office and clinic workflows

Decreases complications and amputation rates

Improves patient quality of life

Clinically proven to be safe and effective

The dermaPACE System is clinically proven to contribute to improved patient outcomes by providing a convenient, fast, and seamless therapy that reduces the time to heal and provides significant cost savings to your wound care center.

Who Is a Good Candidate for dermaPACE?

Patients presenting with chronic advanced stage diabetic foot ulcers that have not responded to standard of care within the previous 30 days are considered good candidates for treatment with the dermaPACE System. Other clinical indications for use include:

- Less than 50% wound area reduction with standard of care
- Full-thickness diabetic foot ulcers
- Wound area no larger than 16 cm²
- Wagner ulcer grade 1 or 2, stage A
- Adults 22 years and older

Please refer to the Instructions for Use for additional information.
